K. HQs will be screaming for them at 7am anyway. It has always been the plan to shoot for this morning.

Thanks but It's unnecessary to screen the sediment from 8/11/15. Dave and I screened it manually against the benchmarks and triple checked it. So I'm confident in the results that were sent to Shaun last night. Future sediment results screening would be great though.

I have asked our Data Team to run the tox queries that Wendy and Megan Adamczyk wrote the first day Megan arrived.

I think I can have this done by 7am when we release our next round of data to HQs.

Not sure if this will help, sorry I could not divert resources last night.
